

Case presentations

A 30-year-old nulliparous woman presented with a squamous cell carcinoma of the cervix. All her other examinations and blood tests were normal. Her imaging studies showed no metastasis. She is requesting for a fertility-sparing surgery. What would your recommendations be if her tumor sizes were:

- a. 1 cm (<50% myometrial invasion)
- b. 3 cm
- c. 5 cm
- d. 7 cm
